

There will be five test images for the evaluation of both the programs. For each test image, run the program and save the output as an image. The filename, output filename, and required window size are listed below.

**Naming of output images:** e.g. 21.png corresponds to second program running on test1.ppm. 13.png corresponds to first program running on test3.ppm.

File Name	Window Size				Output
	W1	H1	W2	H2	
test0.ppm	0	0	1	1	10.png, 20.png
test1.ppm	0	0	1	1	11.png, 21.png
test2.ppm	0	0	1	1	12.png, 22.png
test3.ppm	0	0	1	1	13.png, 23.png
test4.ppm	0	0	1	1	14.png, 24.png

Collect the 10 output images (5 from the first program, 5 from second) in a folder named by your NetID (in small letters, e.g. sxs136132) and copy it to TA.
